

Linear Accelerator

Oncology Hematology Care

Architect: ATA-Beilharz Architects
Duration: 3 Months

Repeat client Oncology Hematology Care involved Oswald early in this multi-phased project due to a fast-track schedule. Oswald worked with the architect in the design/pre-construction phase to specify materials with short lead times to meet installation deadlines. The addition housing the linear accelerator was completed in two months. The final phase consisted of a two-phase renovation of existing space. All work was completed while the building was occupied.

"This complicated project had the added challenge of the linear accelerator needing to be in operation before the end of the year to take advantage of a 50% tax depreciation. Oswald made it happen."

-David Ritter, Facilities & Asset Manager
