

R & B, Inc. Building Addition

Architect: Clarisey Frank Architecture
Duration: 7 Months

To accommodate R & B's expansion and to allow for long term growth, this 77,200 SF addition increased the existing warehouse size by more than one third. Using high bay storage, narrow aisle racking, and wire-guided equipment increased the capacity of the current facility by an additional 45%. The addition has a structural steel frame, masonry wainscot, and a metal siding exterior.
