

Commonwealth Orthopaedic

St. Elizabeth Medical Center

Architect: Champlin Architecture
Duration: 11 Months

The Oswald Company recently completed a 46,000 SF freestanding orthopaedic center, located on the St. Elizabeth Medical Center campus. After being dropped off under the cantilevered canopy, patients enter a light-filled atrium topped by a barrel roof. The first floor leads to exam and procedure rooms and includes MRI and X-ray rooms. Physical Therapy is located on the second floor.

"[The Oswald Staff] performed their work better than I have ever experienced in my thirty five years as a hospital facilities executive."

-Mark Krahe, Project Manager
