

# Zumbiel Packaging

## New Construction

Architect: KZF Design  
Duration: 8 Months

This consumer packaging firm needed to consolidate three facilities and expand and update their operation. Oswald Company built a new 320,000 SF plant with a structural steel frame, tilt-up skin concrete exterior, membrane roof, and 18 dock doors. The interior has four structural steel and precast concrete plank mezzanines for office and storage space. Also inside: a large baler room to recycle scrap paper, a plate room, and a 21-ton Fischer & Krecke 67" eight-color flexo printing press imported from Germany.

**"We have been extremely pleased with all areas of Oswald. Everyone has been prompt in responding to our questions and needs. With all the risks that are out there now we feel fortunate to be working with a company like Oswald, keep up the good work!"**
